

EU Seen Meeting Renewable Fuel Targets With Blends

Date: 06-Jul-09

Country: GERMANY

Author: Michael Hogan

HAMBURG - The European Union is likely to achieve its target of generating 10 percent of transport fuels from renewable sources by 2020 by blending biofuels with fossil fuels, a leading EU researcher said.

Most blending is likely to use first-generation biofuels produced with food crops, said Giovanni De Santi, director of the Energy Institute at the European Union Commission's Joint Research Center.

The EU plans to source 10 percent of transport fuels from renewable sources by 2020 to combat global warming.

All EU countries must now prepare plans to show how they plan to reach green energy targets (...)
